# INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(Chapter II of the Patent Cooperation Treaty)

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference 49324-296	· ·		See Form PCT/IPEA/416		
International application No.	International filing date (da	y/month/year)	Priority date (day/month/year)		
PCT/CA2004/000505	02.04.2004		02.04.2003		
International Patent Classification (IPC) or national classification and IPC A61K9/127, A61K9/51, A61K31/4745, A61K31/7072, A61K47/02					
Applicant		•			
CELATOR TECHNOLOGIES, INC.		· .	<u>-</u>		
Authority under Article 35 and tra	<ol> <li>This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36.</li> </ol>				
2. This REPORT consists of a total	of 7 sheets, including this	s cover sheet.			
3. This report is also accompanied t	by ANNEXES, comprising	:			
a. 🛛 sent to the applicant and t	to the International Bureau	u) a total of 2 sheets,	as follows:		
and/or sheets contain Administrative instruc	ing rectifications authorize tions).	ed by this Authority (se	nended and are the basis of this report se Rule 70.16 and Section 607 of the		
sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box.					
b. (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s)), containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).					
4. This report contains indications r	4. This report contains indications relating to the following items:				
☐ ☐ Box No. I Basis of the or	⊠ Box No. I Basis of the opinion				
☐ Box No. II Priority	٠.				
☒ Box No. III Non-establish	ment of opinion with regar	d to novelty, inventive	step and industrial applicability		
☐ Box No. IV Lack of unity of	f invention				
⊠ Box No. V Reasoned state applicability; c	- and a second to a supply inventive step or industrial				
☑ Box No. VI Certain docum	•				
	s in the international appli				
☐ Box No. VIII Certain observ	☐ Box No. VIII Certain observations on the international application				
Date of submission of the demand		Date of completion of the	nls report		
19.01.2005		25.07.2005

# INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/CA2004/000505

•	• •		
	Box No. 1 Basis of the report	·	
1.	With regard to the language, this report is based on the international application in the language in which it will filed, unless otherwise indicated under this item.		
	☐ This report is based on trans which is the language of a tr	slations from the original language into the following language , anslation furnished for the purposes of:	
	international preliminary	tional application (under Rule 12.4) examination (under Rules 55.2 and/or 55.3)	
2. With regard to the elements* of the international application, this report is based on (replacement sheets have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in treport as "originally filed" and are not annexed to this report):			
	Description, Pages		
	1-26	as originally filed	
	Claims, Numbers		
	1-19	received on 09.05.2005 with letter of 04.05.2005	
Drawings, Sheets			
	1.6-6.6	as originally filed	
	□ a sequence listing and/or a	ny related table(s) - see Supplemental Box Relating to Sequence Listing	
3.	☐ The amendments have res	ulted in the cancellation of:	
	☐ the description, pages		
	☐ the claims, Nos. ☐ the drawings, sheets/figs	s	
	☐ the sequence listing (sp	ecify):	
	☐ any table(s) related to s	equence listing (specify):	
4	☐ This report has been estab had not been made, since they Supplemental Box (Rule 70.2(c	lished as if (some of) the amendments annexed to this report and listed below have been considered to go beyond the disclosure as filed, as indicated in the )).	
•	☐ the description, pages	,, , , , , , , , , , , , , , , , , , ,	
	☐ the claims, Nos. ☐ the drawings, sheets/fig	s.	
	☐ the sequence listing (sp	ecify):	
	☐ any table(s) related to s		
	* If item 4 applies, s	ome or all of these sheets may be marked "superseded."

# INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

	Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability				
1.	The obvi	e questions whether the claimed invention appears to be novel, to involve an inventive step (to be non- vious), or to be industrially applicable have not been examined in respect of:			
	ū	the entire international application	on,		
	☒	claims Nos. 1,3-19 (3-19 partial	y)		
		because:			
		the said international application, or the said claims Nos. relate to the following subject matter which does not require an international preliminary examination (specify):			
	Ø	the description, claims or drawings (indicate particular elements below) or said claims Nos. 1,3-19 (3-19 partially) are so unclear that no meaningful opinion could be formed (specify):			
		see separate sheet			
		the claims, or said claims Nos. could be formed.	are s	o inadequately supported by the description that no meaningful opinion	
		no international search report has been established for the said claims Nos.			
		the nucleotide and/or amino acid sequence listing does not comply with the standard provided for in Annex C of the Administrative Instructions in that:			
	•	the written form		has not been furnished	
	•	. •		does not comply with the standard	
	•	the computer readable form		has not been furnished	
				does not comply with the standard	
	. 🗆	the tables related to the nucleonot comply with the technical r	otide equir	and/or amino acid sequence listing, if in computer readable form only, do ements provided for in Annex C-bis of the Administrative Instructions.	
		See separate sheet for further	deta	ils .	

# INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)

Yes: Claims

2-19 (3-19 partially)

No: Claims

Inventive step (IS)

Yes: Claims

2-19 (3-19 partially)

No: Claims

Industrial applicability (IA)

Yes: Claims

·1-19

No: Claims

2. Citations and explanations (Rule 70.7):

see separate sheet

#### Box No. VI Certain documents cited

1. Certain published documents (Rule 70.10)

· and / or

2. Non-written disclosures (Rule 70.9)

see separate sheet

#### Re Item III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

III.1. Claim 1 does not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. The claim attempts to <u>define the pH</u> of the claimed composition in terms of the result to be achieved, namely a pH which maintains the agent in its active lactone ring form. Such a definition is only allowable if the invention can <u>only</u> be defined in such terms (PCT Preliminary examination Guidelines, chapter 5.35). In this instance, however, such a formulation is not allowable because the pH can be defined more precisely without unduly restricting the scope of claim 1. Mutatis mutandis dependent claims 3-19.

Accordingly, novelty and inventive step issues cannot be discussed for claim 1, whereas the examination of claims 3-19 will be limited to pharmaceutical compositions having a pH between 6.0 and 8.0.

#### Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The documents cited in the Search Report (SR) are consecutively numbered D1-D13 in this communication; this numbering will be adhered to in the rest of the procedure. The cited passage(s) for each citation will be considered unless otherwise specified.

#### V.1. Novelty

Claim 2 appears to be novel over the available prior art. Under the proviso of item III.1, claims 3-19 also appear to be novel over the available prior art.

## V.2. Inventive step (claims 3-19 under the proviso of item III.1)

- a) D3, which is considered to represent the most relevant state of the art, discloses liposomes containing manganese ions (300mM) and topotecan, the loading of the latter being accomplished by means of an ionophore-mediated proton gradient. As a result of this, liposomes with an acidic internal pH are provided, which permits the topotecan to maintain its active lactone form.
- b) The subject-matter of claims 2-19 differs from D3 in that the in D3 described compositions present an acidic intraliposomal pH, whereas the pH of the external solution is not specified.
- c) The technical problem to be solved by the present invention consists of providing alternative pharmaceutical compositions of active agents having a lactone ring and requiring such a ring for their pharmacological activity, whereby the composition maintains the active agent in its active ring-closed form at a pH in the physiological range (between 6.0 and 8.0).
- d) The solution proposed by the applicant constitutes a composition comprising the active agent in combination with a transition metal ion.
- e) Prior art does not give any indication to use metal transition ions in order to stabilise the lactone ring of active agents which require such a closed ring for their pharmacological activity. In addition, the applicant has provided evidence that the technical problem can be solved by the present invention.
- f) Therefore, claims 2-19 may be regarded as involving an inventive step in the sense of Article 33(3) PCT.

#### Claims

- 1. A pharmaceutical composition comprising an agent which is active when substantially in lactone ring form and a transition metal ion, said composition having a pH such that conversion of said lactone to a carboxylate would normally result, wherein said ion is present at sufficient concentration to stabilize said lactone.
- 2. The composition of claim 1 wherein the pH of the preparation is between 6.0 and 8.0.
- 3. The composition of claim 1 of 2 wherein the active agent and the transition metal ion are stably associated with one or more delivery vehicles selected from the group consisting of lipid carriers, liposomes, lipid micelles, lipoprotein micelles, lipid-stabilized emulsions, cyclodextrins, polymer nanoparticles, polymer microparticles, block copolymer micelles, polymer-lipid hybrid systems and derivatized single chain polymers.
- 4. The composition of any of claims 1-3 wherein at least 40 mole % of the active agent is present in the ring-closed, lactone form at physiological pH.
- 5. The composition of claim 4 wherein at least 50 mole % of the active agent is present in the ring-closed, lactone form at physiological pH.
- 6. The composition of any of claims 1-5 wherein the active agent is camptothecin or a derivative thereof.
- 7. The composition of claim 6 wherein the camptothecin is a water-soluble derivative.
- 8. The composition of claim 7 wherein the water-soluble derivative is selected from the group consisting of topotecan, irinotecan and lurtotecan.
- 9. The composition of any of claims 1-8 wherein the active agent and the metal are at a concentration of greater than 100 μM.

- 65 W 1997
- 10. The composition of any of claims 1-9 wherein said ion is of transition metal is selected from the group consisting of Cu, Zn and Co.
  - 11. The composition of claim 10 wherein the transition metal is Cu.
- 12. The composition of any of claims 3-11 wherein the delivery vehicle is a liposome.
- 13. The composition of claim 12 wherein the liposome is a large unilamellar liposome.
- 14. The composition of any of claims 3-11 wherein the delivery vehicle is a liposome and the transition metal ion is Cu + 2.
- 15. The composition of claim 14 wherein the active agent is a camptothecin or a derivative thereof.
- 16. The composition of claim 15 wherein the camptothecin is a water-soluble derivative selected from the group consisting of lurtotecan, topotecan and irinotecan.
- 17. The composition of any of claims 3-11 wherein the delivery vehicle is a polymer nanoparticle.
- 18. The composition of claim 17 wherein one or more polymers making up the nanoparticle are complexed with a transition metal ion.
- 19. The composition of claim 18 wherein the nanoparticle comprises a stabilizing lipid.
